

INPUT VALIDATION ISSUES 1

' OR '1'='1

Como '1'='1' siempre es verdadero, la consulta devuelve todos los registros de la tabla.

Android Emulator - lab:5554

7. Input Validation Issues - Pa...

Objective: Try to access all user data without knowing any user name. There are three users by default and your task is to output data of all the three users with a single malicious search.

Hint: Improper or no input validation issue arise when the input is not filtered or validated before using it. When developing components that take input from outside, always validate it. For ease of testing there are three users already present in the database, for example one of them is admin, you can try searching for admin to test the output.

OR 1=1

User: (admin) pass: (passwd123) Credit card: (1234567812345678) SEARCH

User: (diva) pass: (p@ssword) Credit card: (1111222233334444)

User: (john) pass: (password123) Credit card: (5555666677778888)
