

INSECURE DATA STORAGE 2

Tendríamos que modificar aquí para evitar el problema.

Esta línea

// LÍNEA VULNERABLE

```
this.mDB.execSQL("INSERT INTO myuser VALUES ('" + ((EditText)
findViewById(R.id.ids2usr)).getText().toString() + "', '" + ((EditText)
findViewById(R.id.ids2pwd)).getText().toString() + "');");
```

Deberíamos usar esta:

```
// Extraer valores primero.
```

```
EditText usernameField = (EditText) findViewById(R.id.ids2Usr);
```

```
EditText passwordField = (EditText) findViewById(R.id.ids2Pwd);
```

```
String username = usernameField.getText().toString();
```

```
String password = passwordField.getText().toString();
```

```
// Usar parámetros (SEGURO contra SQL Injection)
```

```
this.mDB.execSQL("INSERT INTO myuser VALUES (?, ?)", new String[]{username, password});
```
