

Insecure Storage

Usar EncryptedSharedPreferences

// Configurar la clave maestra

```
MasterKey masterKey = new MasterKey.Builder(context)
    .setKeyScheme(MasterKey.KeyScheme.AES256_GCM)
    .build();
```

// Crear SharedPreferences cifradas

```
SharedPreferences securePrefs = EncryptedSharedPreferences.create(
    context,
    "secure_preferences",
    masterKey,
    EncryptedSharedPreferences.PrefKeyEncryptionScheme.AES256_SIV,
    EncryptedSharedPreferences.PrefValueEncryptionScheme.AES256_GCM
);
```

```
// Guardar credenciales (se cifran automáticamente)
```

```
securePrefs.edit()
```

```
.putString("user", username)
```

```
.putString("password", password)
```

```
.apply();
```

Ventaja: Los datos se guardan cifrados en el archivo XML.
